Course Description

In this course students will be exposed to the principles, content and practice of the family medicine and primary health care. The course emphasizes the central characteristics and core competencies of the discipline of family medicine. The students will learn the difference in practice of medicine between the hospital and Primary Health Care settings. The students will be trained in Primary Health Care Centers (PHCCs) to understand and practice concepts of primary, comprehensive and continuing care to the individuals, families and to the community by and large. The students will learn also specific problem-solving skills that enable them to use epidemiological knowledge of community prevalence of illness and risk factors to make their hypothesis and diagnosis about the problems presented in PHC settings. During the course the students will see how the family physician views his or her practices as a population at risk and organize the practice to ensure that patients' health is maintained whether or not they are visiting the practice. The art of family physician in providing person centered care and holistic approach using the bio-psychosocial model of illness will be demonstrated to the student during the clerkship period.

It's compulsory to conduct a research/audit
